1. Website Overview

Ye project ek professional business website demo hai. Iska design companies, agencies, shops, clinics, coaching centers, local service businesses aur client presentation ke liye bana hai. Website static frontend hai, isliye isko normal hosting par easily run kiya ja sakta hai.

Main Features

- Professional modern UI with responsive mobile-first layout.
- Topbar me phone, email aur address show hota hai.
- Navigation menu: Home, About, Services, Projects, Contact, Get Quote.
- Hero section, service cards, pricing section, project showcase, testimonials aur CTA buttons.
- Contact form demo leads ko browser localStorage me save karta hai.
- Demo Leads Panel contact page par submitted enquiries dikhata hai.
- SEO friendly meta title, description, keywords aur theme color included hain.
- Brand data ek central JS file se manage hota hai: assets/data/site-data.js.

2. Folder Structure

Zip extract karne ke baad project structure kuch is tarah hai:

File/Folder	Kaam
index.html	Home page - main landing page
about.html	Business story, highlights aur values page
services.html	Services + pricing packages page
projects.html	Projects showcase + testimonials page
contact.html	Contact form + demo leads panel
assets/css/style.css	Website ka complete design/style
assets/js/main.js	Menu, reveal animation, form save, leads display logic
assets/data/site-data.js	Brand name, phone, email, address, services, projects, testimonials data
README.md	Basic project instructions
requirements.txt	Flask related packages listed, but current website static hai

3. Page-wise Features

Home Page - index.html

- Business hero section with strong headline and CTA buttons.
- Stats/proof section: happy clients, pages, support etc.
- Service preview cards.
- Why choose us / benefits section.
- CTA button visitor ko Contact page par le jata hai.

About Page - about.html

- Business story aur purpose explain karta hai.
- Company highlights: professional design, mobile experience, enquiry focused layout, SEO-friendly structure.
- Values section: Trust, Speed, Conversion.

Services Page - services.html

- Business Website, E-Commerce Setup, SEO & Speed, Brand Design, Maintenance, Custom Flask Apps services listed hain.
- Pricing packages: Starter, Business, Advanced.
- Client ko service aur price samjhane ke liye demo ready layout.

Projects Page - projects.html

- Demo project cards: Clinic Website, Reading Room System, Local Store Website, Agency Landing Page.
- Category tags: Healthcare, Education, Retail, Business.
- Testimonials section included hai jo trust build karta hai.

Contact Page - contact.html

- Contact information card: phone, email, address, WhatsApp link.
- Enquiry form fields: name, phone, email, service, message.
- Submit karne par enquiry browser localStorage me save hoti hai.
- Demo Leads Panel submitted enquiries ko page par show karta hai.

4. Customer/Visitor Use Guide

Visitor website par aakar services dekh sakta hai, projects samajh sakta hai aur enquiry form se apna requirement bhej sakta hai. Demo ke liye backend/database nahi hai, isliye enquiry sirf same browser me save hoti hai.

1. Website open karein.
2. Top menu se Home, About, Services, Projects, Contact pages par ja sakte hain.
3. Get Quote button click karke Contact page kholein.
4. Contact form fill karein aur Send Enquiry par click karein.
5. Contact page ke niche Demo Leads Panel me enquiry show hogi.

5. Contact Form & Demo Leads Panel

Form kaise kaam karta hai?

Contact form JavaScript ke through browser ke localStorage me data save karta hai. Ye sirf demo purpose ke liye hai. Real business website me form ko Flask backend, database, email service ya WhatsApp API se connect karna hoga.

Important Note

- Lead data sirf usi browser/device me dikhega jahan form submit hua.
- Browser cache/localStorage clear karne par demo leads delete ho sakti hain.
- Ye secure database nahi hai, isliye real customer data ke liye production backend chahiye.

6. Brand Content Edit Guide

Website ka brand data mostly assets/data/site-data.js file me hai. Is file me brand name, tagline, phone, email, address, WhatsApp number, services, projects aur testimonials change kar sakte hain.

Common edits

Change karna hai	File	Kya edit karein
Brand name	assets/data/site-data.js	brand value
Phone number	assets/data/site-data.js	phone and whatsapp value
Email	assets/data/site-data.js	email value
Address	assets/data/site-data.js	address value
Services text	assets/data/site-data.js or services.html	services array / page content
Colors/design	assets/css/style.css	CSS variables and classes
Prices	services.html	Starter, Business, Advanced price cards
WhatsApp link	contact.html	wa.me number link

7. Run Website Locally

Is website ko run karne ke liye server compulsory nahi hai, kyunki ye static website hai.

6. Zip file extract karein.
7. demo-main folder open karein.
8. index.html par double click karein.
9. Website browser me open ho jayegi.
10. Testing ke liye Contact page par form submit karein.

VS Code se run karna

11. VS Code me folder open karein.
12. Live Server extension install karein.
13. index.html par right click -> Open with Live Server.
14. Browser me website live preview dikhega.

8. Deploy on Render

README ke hisab se Render par Static Site ke roop me deploy karna hai.

15. Render dashboard open karein.
16. New + button se Static Site select karein.
17. GitHub repository connect karein jisme ye project uploaded ho.
18. Build Command empty chhod dein.
19. Publish Directory me dot (.) set karein.
20. Deploy button click karein.

Note: Agar project kisi subfolder me hai, to Publish Directory me correct folder path dena hoga, jaise demo-main.

9. Customization Ideas

- Business niche ke hisab se text replace karein: clinic, coaching, portfolio, agency, shop, restaurant, service provider.
- Hero section me business ka main offer likhein.
- Services page par actual packages aur pricing add karein.
- Projects page me real client work ya portfolio images add karein.
- Testimonials me real customer reviews add karein.
- Contact page me real WhatsApp number, email, address aur Google Map link add karein.
- Form ko Flask backend, database aur email notification se connect karein.

10. Limitations & Real Website Upgrade

Current project demo website hai. Real client/business use ke liye kuch upgrades recommended hain:

- Contact form ko backend/database/email se connect karna.
- Admin panel add karna jahan leads manage ho sake.
- Real images and logo add karna.
- Google Analytics/Search Console setup karna.
- Domain, SSL aur professional email setup karna.
- Privacy Policy, Terms page aur business legal details add karna.
- SEO optimized content and schema markup add karna.

11. Troubleshooting

Problem	Solution
Website blank/open nahi ho rahi	Check karein ki index.html browser me open ho raha hai aur files same folder me hain.
CSS load nahi ho raha	assets/css/style.css path check karein.
Brand details update nahi ho rahi	assets/data/site-data.js edit karke browser refresh karein; cache clear karein.
Mobile menu open nahi ho raha	assets/js/main.js load ho raha hai ya nahi check karein.
Leads show nahi ho rahi	Same browser me Contact form submit karein; localStorage clear na ho.
Render deploy issue	Static Site select karein; Build Command blank; Publish Directory correct set karein.

12. Quick Demo Script for Client

Client ko demo dikhate waqt ye short flow use karein:

21. Home page se website ka professional look aur CTA buttons dikhayein.
22. About page par company story, trust points aur values dikhayein.

23. Services page par services aur pricing packages explain karein.
24. Projects page par sample work aur testimonials dikhayein.
25. Contact page par enquiry form fill karke submit karein.
26. Demo Leads Panel me saved enquiry dikhayein aur batayein ki real website me ye database/email/admin panel se connect ho sakta hai.
